

Online Editing (Adding Global Variables)

Steps

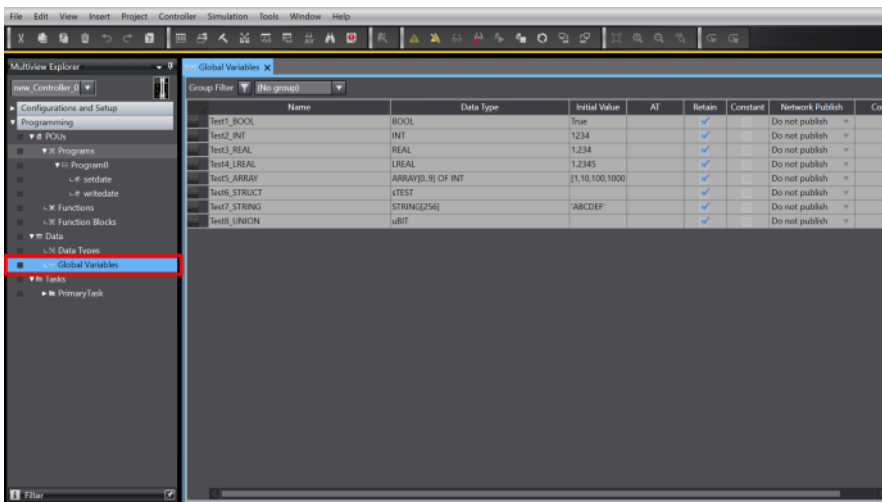

This section describes how to add global variables during online editing.

- ① Open the global variable table.
 - ② Start online editing.
- * If you have already started online editing on another page, you need to end it first.
- ③ Add global variables.
 - ④ Transfer the changes

Detailed Steps

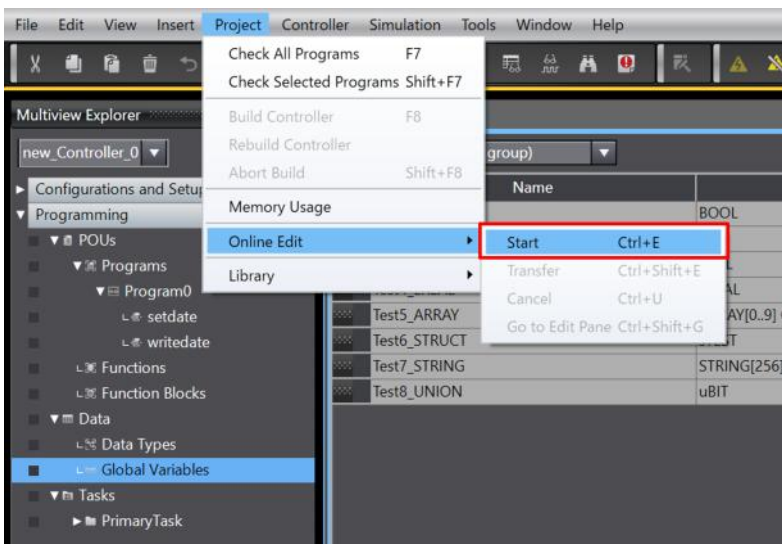

① Open the global variable table.

Click [Programming] - [Data] and double-click [Global Variables] in the “Multiview Explorer” to open the global variable table to edit.

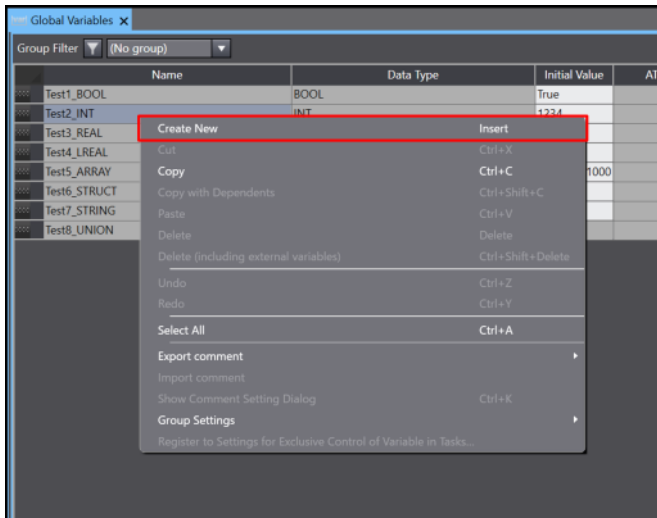

② Start online editing.

Make sure you are online and press "Ctrl+E" or select [Project] - [Online Edit] - [Start] from the menu to start online editing.

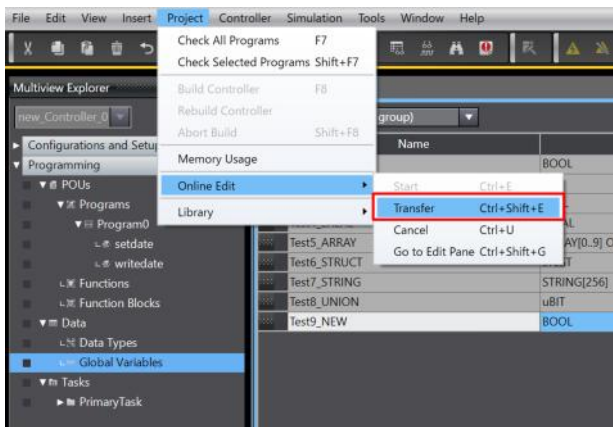

③ Add global variables.

Right-click in the global variable table and select [Create New] from the menu. Always enter the "Name" and "Data Type", and optionally any other items as needed.

④Transfer the changes

Press "Ctrl+Shift+E" or select [Project] - [Online Edit] - [Transfer] from the menu to transfer the changes.
