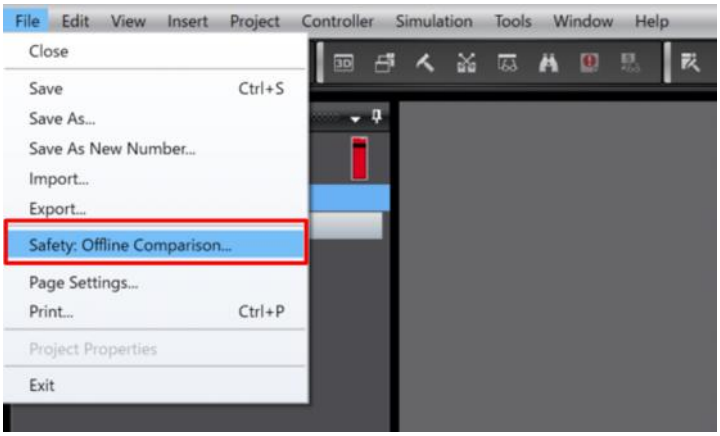
Comparing The Safety Unit Offline

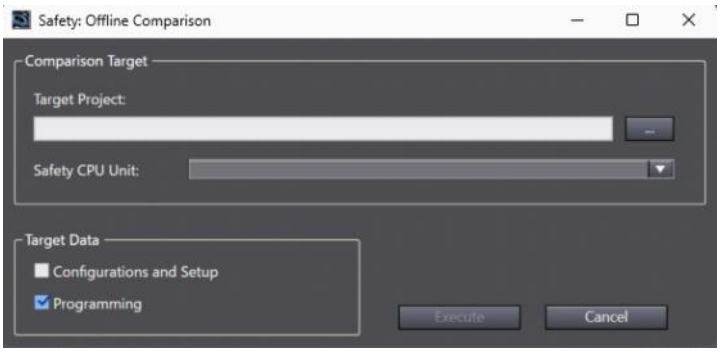
Steps

This section describes the offline comparison of the safety application data.
① Open Safety: Offline Comparison Window.
② Select the project file to compare with.
③ Select the data to be compared.
④ Press the [Execute] button to execute the comparison.
⑤ Check the differences from the comparison results.

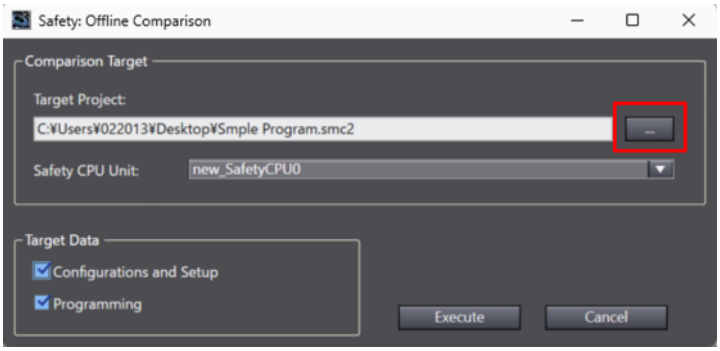
Detailed Steps

① Open Safety: Offline Comparison Window.
Open the project of the Safety CPU Unit.
Click [Safety: Offline Comparison] from the [File] menu.
The Safety: Offline Comparison Window is displayed.



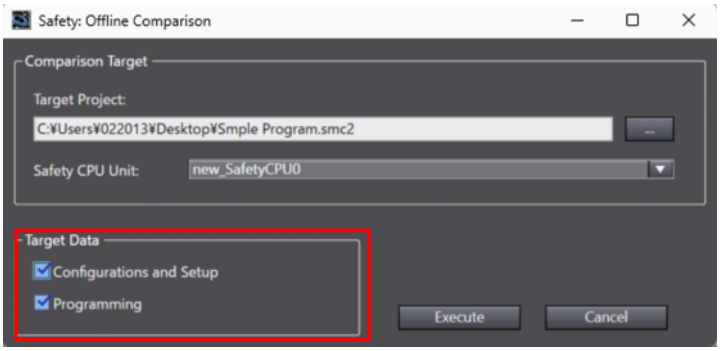


② Select the project file to compare with.
Click the [...] button and select the project file you want to compare offline.



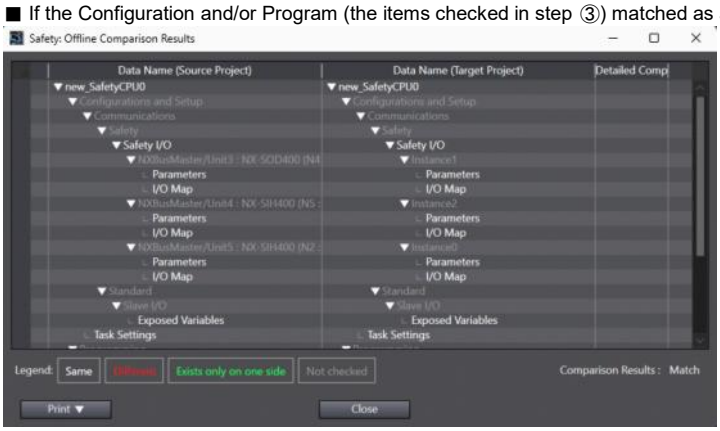
③ Select the data to be compared.

Select the items you want to compare.
☐Configurations and Setup
☐Programming

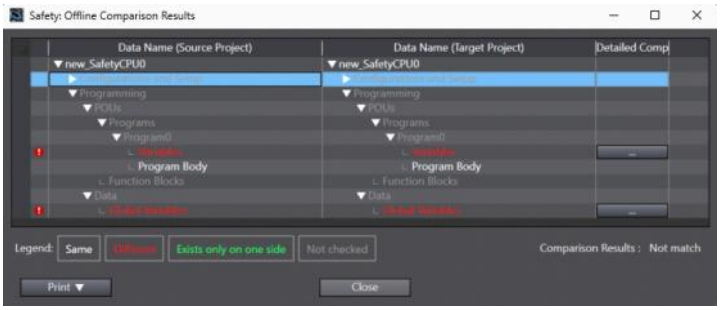


④ Press the [Execute] button to execute the comparison.

⑤ Check the differences from the comparison results.
■ If the Configuration and/or Program (the items checked in step ③) matched as a result of the comparison, the following window is displayed.



■ If the result of comparison does not match, the following window is displayed.



■ For differences, click the [...] button in the Detailed Comparison column to display the details of the comparison results.
